

- 1 The **WingSpan System** is a ultra-high stretch 1.5mm flex panel contoured around your lats and reaching all the way to your lower back. It is designed to provide an unrestricted and fluid swim stroke and to encourage body roll.
- 2 Our **Kung Fu Grip** arms feature unique silicon seals at each wrist to minimize water entry at this critical point and allow for a fast and smooth hand entry.
- 3 The **Nineteen UnCollar**, with its invisible seam and ultra-thin, low-rise design, will make you forget that you even have a wetsuit on.
- 4 Our **PT Buoyancy Panel** is a massive 5mm panel of high-stretch Speedline SCS Nano neoprene to prevent your hips from sinking. This helps position you in an optimal "downhill" swimming position and lowers your swim times.

# nineteen

## UNBELIEVABLE SPEED

The **Nineteen Frequency** represents the next generation of triathlon wetsuits.

No longer do you have to choose between flexibility and buoyancy. Our exclusive design maximizes flexibility and buoyancy where each is needed producing the most flexible wetsuit ever in the torso and at the same time the most buoyant suit ever in the hips and legs.

Finally a wetsuit that optimizes your swim technique by delivering exactly what you need, exactly where you need it.
